

Thanks to diligence, great know-how, high quality standards and innovative products, we have achieved a continuously growing position on the international market for high-quality transformers and sensors.

We want to reach our goals also in the future and would like to fill the following position at our location in Wr. Neustadt:

AUTOMATION ENGINEER (M/W) 38,5H

Low and medium voltage technology

Responsibilities:

- Planning, construction, documentation as well as commissioning of our production machines and testing equipment
- Programming of test equipment and software tools
- Work preparation for production employees (creation of work instructions, test instructions)
- Definition of work processes and process parameters of testing/production machines

Requirements:

- Completed technical education with several years of experience
- Relevant experience with LabView required
- High degree of independence, motivation and enthusiasm
- Good command of English

What you can expect from us:

You can expect an exciting and varied job in a collegial environment. You will work in an internationally operating and up-and-coming startup that would like to work with you on new and innovative ideas.

The minimum salary for this position in the employment relationship is according to the very attractive collective agreement of the metal industry. An overpayment is possible depending on experience and qualification.

WE ARE LOOKING FORWARD TO YOUR APPLICATION!
